

WHAT IS CLAIMED IS:

1. An electrophoretic display, comprising: a substrate, a first electrode and a second electrode disposed on said substrate, and microcapsules each,
5 disposed on said substrate, containing a dispersion liquid comprising a dispersion medium and two species of electrophoretic particles different in charge polarity and color,

wherein said first and second electrodes are
10 disposed so as to create an electric field along a surface of said substrate and are to be supplied with a voltage so as to move said two species of electrophoretic particles in mutually opposite directions along said electric field to effect
15 display.

2. A display according to Claim 1, wherein both of said first and second electrodes are disposed on the surface of said substrate.

20

3. A display according to Claim 1, wherein said first electrode is disposed on the surface of said substrate and said second electrode is disposed between adjacent microcapsules.

25

4. A display according to Claim 2, wherein the colors of said two species of electrophoretic

particles are white and black and said display effects
white and black display.

5. A display according to Claim 1, wherein a
5 color filter is disposed on said microcapsules to
effect color display.
